High Performance Packaging

CurTec manufactures high performance plastic packaging for pharmaceutical companies producing active ingredients, excipients and solid dosage forms such as tablets and capsules. Adding value to their supply chain through clever packaging solutions is our objective.

This brochure shows some of the many pharma applications where we have been able to add value by providing clean, safe and certified packaging products. [About CurTec](#)

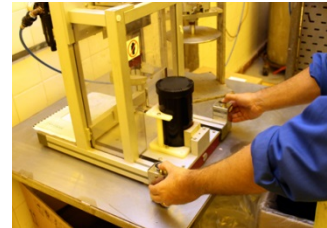

Enzymes

Packos are used for shipping food enzymes. The small volume container has to be food safe and manufactured by a supplier with a HACCP system. It also has to fit into the existing filling machine and comply with the company's key values: innovative, sustainable, international and capable of contributing to supply and development. [Read the full customer story](#)

UV lacquers

UV safe drums and Packos are used to ship UV curable lacquers. Drums and Packos with a special barrier prevent lacquers from curing through light. The containers should be leak tight to avoid leakage under pressure and ultra clean because the tiniest bit of dirt will ruin the lacquers. [Read the full customer story](#)

Biocides

Swedish antifouling bio-tech innovator I-Tech AB has developed a new 'drop-in, dust-free' dissolvable packaging system to enhance the way the active agent Selektope® is added to marine coatings during the manufacturing process. Packo screw lid jars are part of the system and provide protection during transport. [Read the full customer story](#)

Precious metals

Wide Neck Drums are used for the safe storage and shipment of precious metal powders. The drums need to be air tight to prevent loss of product (caused by air pressure) during transport and water vapour tight to avoid caking/ clumping of powders. On top of that, cleanliness is paramount to avoid contamination of the precious content.

Biosecurity disinfectants

Strong weapons need strong casings. Our robust yet small plastic Packo jar protects Virkon™ S – a powerful broad spectrum veterinary disinfectant, which is used extensively to fight foot and mouth disease, avian influenza and salmonella. In fact, it is so powerful, it is effective against over 500 strains of viruses, bacteria and fungi and is selected by governments worldwide for emergency disease control.
