

Specialty Chemicals Applications

CurTec 

 25 YEARS HIGH
PERFORMANCE
PACKAGING

High Performance Packaging

CurTec manufactures High Performance Plastic Packaging for companies producing specialty chemicals for various (pharmaceutical, food, cosmetic, polymer) industries. Adding value to their supply chain through clever packaging solutions is our objective.

This brochure shows some of the many applications where we have been able to add value by providing clean, safe and certified packaging products.

Agro chemicals

Click Packs are used for shipping crop protection agents and chemicals. The containers have to be safe and easy to handle. The packs also have to be easy to clean by users and their appearance has to be high-quality in order to support the company's image. [Read the full business case](#)

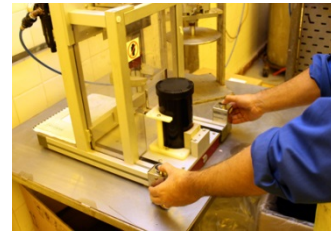

Enzymes

Packos are used for shipping food enzymes. The small volume container has to be food safe and manufactured by a supplier with a HACCP system. It also has to fit into the existing filling machine and comply with the company's key values: innovative, sustainable, international and capable of contributing to supply and development. [Read the full business case](#)

UV lacquers

UV safe drums and Packos are used to ship UV curable lacquers. Drums and Packos with a special barrier prevent lacquers from curing through light. The containers should be leak tight to avoid leakage under pressure and ultra clean because the tiniest bit of dirt will ruin the lacquers. [Read the full business case](#)

Coatings

Custom designed bottles are used as primary packaging for optical fibre coating. The bottles meet several strict requirements: correct and consistent dimensions to enable a perfect fit with emptying machinery (customers empty mechanically) – absence of particles (even the slightest form of contamination causes a drop in performance) – withstand 95 kPa pressure (the bottle has to be suitable for future hazmat applications).

Precious metals

Wide Neck Drums are used for the safe storage and shipment of **precious metal powders**. The drums need to be air tight to prevent loss of product (caused by air pressure) during transport and water vapour tight to avoid caking/ clumping of powders. On top of that, cleanliness is paramount to avoid contamination of the precious content.

Specialty polymers

Customised Wide Neck Drums are used for bulk shipment of high performance resins.

The drum lids have been customised in company colours to support brand recognition. A high level of cleanliness is important to prevent contamination of the polymer powders and pellets.
